NO!

JUST AN INTERNET SCAM

#17 Axxess+ Chrysler Key Blank

#14 Axxess+ GM Key Blank

These are two of the "master keys" just received that are involved in the CA-2001-000 case alert issued by the NICB. As any of us in the forensic or investigative Locksmithing field can clearly see, these are just aftermarket key blanks cut with an experimental depth from a tryout set. The keys that this company is charging \$25 apiece, are more of a gimmick than a reality. The wholesale price of one of these blanks is less than a dollar. Do the math and consider the profit.

Two other investigators and I tried the #17 key in a 2000 Dodge Durango with no success in either the door or ignition locks. The #14 key was tried in a 2001 Chevrolet Tahoe and a 2002 Chevrolet Trailblazer, also with no success. It is clearly noted in the instructions that some efforts will cause damage to the wafers. In reality, any method using these tryout keys will cause some noticeable microscopic damage.

Because these are just a variation of existing tryout keys, no other explanation is necessary. However, if any one requires additional information or would like for me to do further testing please advise. If you would like to obtain a copy of one of these two keys, I will be happy to supply them to you at no cost.
